Latest Information Exhibitors, Demonstrations, Workshops Benicia CleanTech Expo 2013 Clock Tower, Benicia, CA – October 18, 19, 2013

With only days left prior to Solano County's first and only Exposition dedicated to Clean Technology, those interested in seeing, learning and talking with a wide spectrum of clean tech enterprises need to mark their calendars to attend the Benicia CleanTech Expo 2013 at the Benicia Clock Tower, October 18 (1-6PM) and 19 (10AM -4PM).

Over forty exhibitors will present ideas, products and services ranging from 3D printing to clean buildings to innovative and sustainable agricultural applications. There will be demonstrations from a rapid prototyping firm using advanced 3D printing for engineering and commercial applications, as well as 3D printing for classroom use, and two exhibitors with entrepreneurial use of 3D printing for newly patented devices.

Expo will have a Clean Transportation emphasis this year. Three electric car dealers (Nissan, Toyota and Chevrolet), and four electric bicycle dealers will offer test rides in these quiet, efficient and pace-setting vehicles. Mission Motorcycles will exhibit several Zero Motorcycles.

Attendees can make a day of learning and exploring by taking a free ride on the Clean Transportation SolTrans shuttle to the Benicia Historical Museum, Arts Benicia Gallery and back to the Expo.

Workshops will be given on the half hour on topics such as residential energy upgrades, the Benicia Resource Incentives program (for saving Benicia Industrial Park enterprises money and energy), solar power, recycling, sustainable communities and the history and future of electric bicycles, and much more.

A winner of the free raffle on Friday, October 18th will take home an iPad mini. On Saturday, October 19th someone will win a brand new electric bicycle valued at \$2000.

This event is free to the public.
